NYAYMITRA 2.0 — Government Pitch Deck

8–10 slide presentation: title, problem, solution, innovation, prototype, architecture, impact, roadmap, request

NYAYMITRA 2.0 — Government Pitch Deck (8–10 slides)

Slide format: one section per slide. Intended for a 5–7 minute presentation.

Slide 1 — Title

NYAYMITRA 2.0 AI-Powered Inclusive Justice Access & Navigation System A functional software prototype / Proof of Concept Presented for institutional mentorship and pilot support Not legal advice; not a replacement for lawyers or courts

Slide 2 — Problem

Millions of Indians cannot access or understand legal information.

- Legal provisions are formal and English-heavy.
- Citizens do not know which article, statute, or department applies.
- Free legal aid (NALSA/DLSA, 15100) is under-used due to low awareness.
- Complaint drafting is intimidating and error-prone.

Result: constitutional rights (Article 39A) remain theoretical for many.

Slide 3 — Solution

NYAYMITRA 2.0 guides citizens to understand, navigate, and act:

- Plain-language legal answers with citations (English + Gujarati).
- Department directory, triage guides, glossary.
- Guided complaint drafting with consent, preview, and token retrieval.
- Offline-first — works with no AI key, no internet, no external model.

Slide 4 — Innovation

- Offline-first deterministic grounding: no invented legal citations.
- Multilingual with Gujarati digit normalisation for article references.
- Data protection by design: token hashing, rate limiting, PII redaction, 180-day retention.
- Transparency: every answer shows sources, verification status, warnings, disclaimers.

Slide 5 — Working prototype (evidence)

- 226 automated tests pass; 92% coverage; pip-audit clean.
- Database integrity OK; 4 migrations; 0 missing indexes.
- App starts; `/api/v1/ready` = 200; offline provider active.
- jsdom smoke test: all citizen journeys and admin console work.
- Legal content NOT yet verified (0 of 9 articles) — reviewer ready, appointment needed.

Slide 6 — Architecture

Frontend: vanilla JS/HTML/CSS, no CDN, accessible. Backend: FastAPI (Python 3.11), SQLite. AI/RAG: FTS5 retrieval + citation guard + offline fallback. Deployment: Docker, systemd, Render shape; .env.example (no secrets).

Slide 7 — Evidence of progress

- Repository: https://github.com/dhundhwana-arch/Nyaymitra-2.0
- Branch `arena/812d6894-nyaymitra-2-0`, commit `1e9fe61`
- PR #1 open, draft, mergeable; CI green.
- Full documentation suite: security, privacy, IP, legal, setup, audit.

Slide 8 — Social impact

- Faster, cheaper first-level legal navigation.
- Reduced load on legal-aid bodies for simple queries.
- Greater rights awareness in rural/under-served communities.
- Reusable open prototype for civic technology in India.

Slide 9 — Roadmap and support

Needed: qualified legal reviewers, AI inference infrastructure, testing devices, secure hosting, pilot partners. Milestones: legal review (M1), AI verified (M1–2), device testing (M2), pilot (M2–3), field-ready prototype (M3).

Slide 10 — Closing request

Review PR #1; appoint a legal reviewer; support AI inference and device testing; consider a controlled pilot with a legal-aid body. No guarantee of selection, funding, approval, or adoption is implied.
