NYAYMITRA 2.0 — Demo Script

Three citizen journeys with synthetic data: legal question, sources, department/human assistance

NYAYMITRA 2.0 — Demo Script

Three citizen journeys using synthetic demonstration data only. No real personal data is used.

Prerequisites

```bash git clone https://github.com/dhundhwana-arch/Nyaymitra-2.0.git cd Nyaymitra-2.0 git checkout arena/812d6894-nyaymitra-2-0 python3 -m venv .venv && . .venv/bin/activate pip install -r backend/requirements-dev.txt python scripts/init_db.py uvicorn backend.app.main:app --host 0.0.0.0 --port 8000 ``` Open http://localhost:8000/

Verification status of demo journeys

All three journeys were exercised against a live `uvicorn` server using the `scripts/smoke_web.mjs` jsdom test and the backend test suite (226 tests pass). They are **partially verified**: the underlying endpoints and behaviour were confirmed by automated tests and a live-server jsdom simulation, but they have **not** been tested in a real browser, on a real device, or with a screen reader (blocker B-3). Each journey below uses synthetic demonstration data only.

1. Legal information question	Partially verified	`pytest` + `scripts/smoke_web.mjs` jsdom simulation against live server; not real-browser tested
2. Retrieve relevant information & sources	Partially verified	`pytest` + `scripts/smoke_web.mjs` jsdom simulation against live server; not real-browser tested
3. Guide to department / human assistance	Partially verified	`pytest` + `scripts/smoke_web.mjs` jsdom simulation against live server; not real-browser tested

---

Journey 1 — A citizen asks a basic legal information question

Verification status: Partially verified (live-server jsdom simulation; synthetic data). Not real-browser or real-device tested.

1. Open the home page. A red banner notes official article text is not loaded (expected — prototype). 2. Switch language to Gujarati (optional), then back to English. 3. In the assistant, type: "What is equality before the law?" (or Gujarati: "[redacted]?") 4. Observe: the answer cites Article 14, is labelled "requires human verification," and ends with a disclaimer that this is information, not legal advice, and to verify with free legal aid (15100). 5. Observe: sources are listed with verification status; no outcome is predicted; no guilt is assigned.

Synthetic data: question "What is equality before the law?" — no personal identifiers.

Expected: Article 14 cited, disclaimer present, "requires human verification" label, no invented citations.
```

Journey 2 — The system retrieves relevant information and displays sources

Verification status: Partially verified (live-server jsdom simulation; synthetic data). Not real-browser or real-device tested.

1. Type an unrelated query: "zzz qqq" (nonsense). 2. Observe: the system returns "no verified information" and "no matching article or guide is loaded"; it does not guess or invent a citation. 3. Type a department-relevant query: "cyber fraud money stolen from bank account." 4. Observe: the system does not cite an unrelated article (e.g., it does not cite Article 21A); it suggests the NALSA/DLSA/tele-law channels and, where matched, the relevant department and triage steps. 5. Observe the citations panel: each source shows article label, title, and verification status.

Synthetic data: queries "zzz qqq" and "cyber fraud money stolen from bank account" — no personal identifiers.

Expected: no hallucinated citations; honest "not found" for nonsense; relevant department guidance for fraud.

Journey 3 — The system guides the citizen toward the relevant department or human assistance

Verification status: Partially verified (live-server jsdom simulation; synthetic data). Not real-browser or real-device tested.

1. Navigate to the complaint form. 2. Enter synthetic details only (e.g., category "cyber crime", title "Unauthorized bank withdrawal", description without any real names/phones/emails). 3. Observe: a preview appears before anything is saved; the submit button is disabled until the consent checkbox is ticked. 4. Tick consent and submit. Observe: a reference (NYM-XXXXXX) and an access token are shown once; copy them. 5. Use the saved-complaint lookup with the reference and token to retrieve the metadata. A wrong token shows the same generic error (no oracle). 6. Observe the department/glossary pages to find the relevant authority and free legal aid (15100 / nearest DLSA).

Synthetic data: placeholder complaint text only — no real personal information.

Expected: preview before submit; consent-gated submit; reference + token issued once; token-gated lookup; no oracle on wrong token; department/helpline guidance.

Notes for the demonstrator

- All inputs are synthetic; do not enter real personal data during the demo.
- The offline provider is active by default; no external model is called.
- Legal content is not yet verified by a human reviewer; present answers as information, not advice.
- The red "official text not loaded" banner is expected until official Constitution documents are ingested (blocker B-1).
